Installation Manual

- Step 1. To find the adequate azimuth first, then drill the holes on the installed surface and fixed the bottom mount assembly (5) on the hole, and adjust the 45° pole to be vertical to the ground. Be sure No trees, leaves, buildings can be in the line-of-sight between antenna and satellites. (2)
- Step 2. Assemble the LNB Arm/Dish Bracket (2) and Tilting AZ/El mount (4) pre-Assembly with 1/4"*1/2" round head square screw. (12)
- Step 3. Assemble the reflector (1) and LNB Arm/Dish Bracket (2) and Bracket Multi switch (3) together With 1/4"*L10mm round flat head square screw (7) and assembly Multi-Switch (a) on Bracket Multi-Switch with 1/4"*3/4" hex-cross-head cap screw (11)
- Step 4. Assemble the Y-Adapter (6) to the end of LNB Arm with 10#-32UNF Square screw (9) & 10#-32UNF Round head Cross nut (10), then put the LNB on the Y-Adapter with (9) & (10)
- Step 5. Adjust the Azimuth (horizontal, side/side), Elevation (vertical, up/down), and Tilt (dish reflector rotation) to find the suitable Antenna site, then please tight up all the screw in this stage.
